

- All the long distance companies were vague about any plans to provide local residential service. Sprint representatives reported no plans to go into the residential market in any of the three cities, except Orlando. Paradoxically, MCI indicated tentative plans to offer residential service in New Orleans and Greenville, where they currently do not offer business service, but indicated no plan to provide service in Orlando, where they are providing local service to business customers.
- Smaller competitors had no plans to provide residential service.
- When asked why they were not providing residential local service, none of the carriers' representatives indicated that the local phone company was keeping them out of the market. When representatives answered the question, they only indicated that their current marketing plan was to focus on business customers.

Why are these companies refusing to provide service to residential customers? The long distance companies loudly proclaimed a desire and a commitment to serve residential consumers. What explains their absence from this market?

- Local residential service is costly to provide. Business service has traditionally been priced higher than residential service, offering providers a higher profit margin than the residential market. Without government mandates, competition will enter markets that offer the best chance to turn a profit.
- Press reports indicate that the potential competitors underestimated the difficulty of putting together effective business and marketing plans for offering local service to consumers. News of AT&T and MCI announcements, missteps and refinements of their plans to provide local service has filled newspapers since late in 1996.
- The major long distance companies have a financial self-interest to stay out of residential phone service. The slower the long distance companies move into the local service market, the longer they hope they can keep their most significant competitor, the local phone company, out of the long distance business.

Major Long Distance Companies Providing Local Service

All three of the major long distance companies are authorized by the state regulators to provide service in these three target cities, and all have signed interconnection agreements with the incumbent provider.

	New Orleans		Orlando		S/G	
	<u>Res</u>	<u>Bus</u>	<u>Res</u>	<u>Bus</u>	<u>Res</u>	<u>Bus</u>
AT&T*	NO	YES	NO	YES	NO	YES
MCI	NO	NO	NO	YES	NO	NO
Sprint	NO	YES	NO	YES	NO	NO

*AT&T's digital link service is available nationwide to business customers with T1.5 access (24 phone lines) or greater. This service delivers outbound local calls using existing or new dedicated digital access facilities.

Small Competitive Local Service Providers

Smaller competitors are carefully targeting markets and almost exclusively serving business customers.

The State of Competition in Three Southeastern States

New Orleans

Nearly 80 companies have signed up to offer local phone service in Louisiana. Although ten of those companies are fully certified, only two are actually marketing service to small pockets of business customers in a handful of the states' largest cities.²

"Residential phone customers, who make up the bulk of the local phone market, will have to wait for the long distance giants to enter the market before they have a choice among local service providers, industry observers say. Those are the companies with the resources to serve large numbers of residential customers at a low profit margin."³ "There is more money involved and more concentration [in the local business market.] In the Central Business District in New Orleans, for example, there is more money to be made than, say, one street of residential customers in Baton Rouge," said Janet Britton, a staff attorney for the Public Service Commission.⁴

Eatel, an independent telephone company serving rural Louisiana, is focusing on residential customers first in Baton Rouge. Eatel has offered local service for nearly two months, although it is not advertising or promoting the service widely. Press reports indicated that AT&T "should" be offering services in New Orleans in 1998 and will enter the market as a reseller.

Consumers called customer representatives from various companies to ask about local service. ACSI offers local business service but was up front in stating that they do not plan to offer residential service. One representative of Cox claimed that residential service would be offered after January 1, 1998, another said that residential service "was possible."

⁴ Tom Guarisco, "New Local Phone Service Starts in Baton Rouge," *The Advocate*, April 1, 1997, p.1C.

Orlando, Florida

Over 100 companies are authorized to provide local phone service in the state of Florida and more than 70 interconnection agreements have been signed between CLECs and the incumbent local exchange carriers (ILECs).

Those companies actually offering local service are again focusing on the business market. MCI offers facilities-based service to businesses in Tampa, Orlando, Ft. Lauderdale and Miami.⁵ Sprint, Intermedia, MFS, ACSI and AT&T are also offering local service to business customers in limited areas.⁶ AT&T says that it plans to go after both residential and business customers but so far only business customers have been targeted. AT&T plans to test local residential service in the Southeast first in Georgia. If that goes well, they might begin offering service toward the end of the year.⁷

Teleport Communications Group (TCG) says that it will offer local phone service in the Tampa Bay area and Orlando. Although TCG plans to build its own fiber networks in these cities, the company will likely resell services from other providers until the network is built.⁸ The company did not specify whether it will offer residential services.

Consumers who called companies to inquire about local residential service received a variety of responses. Sprint representatives skirted around the issue of why they provide business but not residential service until they finally just said that Sprint will offer residential service "soon." AT&T diplomatically said that they plan to provide local service when they can offer the value and services desired.

Spartanburg/Greenville, South Carolina

Fourteen companies in South Carolina have filed for and received approval from the Public Service Commission to offer local phone service and fifty-nine interconnection agreements have been signed. However, only three companies, including ACSI and Intermedia, are actually offering local service and then only to a small number of business customers.

These upstart local service companies plan to focus most of their resources on high volume business accounts, ignoring the residential community. When asked what he would tell residential customers, Carl Jackson, director of local exchange services for Intermedia, said, "[I'd] tell them don't wait on [us] for the time being: it's strictly a business focus now."⁹ ACSI spokesman James Falvey echoed that sentiment saying that "the economics aren't there right now for us to provide residential service."¹⁰

The big long distance companies, AT&T, MCI and Sprint, have all been authorized to offer residential local phone service, but only MCI plans to do so. Moreover, at least one CLEC has the facilities to provide local service but has no intention to serve residential consumers.¹¹

Why Not Offer Residential Service?

The Business Plans of the New Entrants

The debate over the slow pace of competition in local service has been focused on the actions of the ILECs. Equally, if not more important, is the strategic planning, capital investment and management decisions of the potential competitors. While there was a great deal of speculation and enthusiasm during the time Congress was working to pass the 1996 Telecommunications Act, the reality of the costs of doing business has toned down the rhetoric.

The Competitors: The Big Dogs

Major long distance companies like AT&T, MCI and Sprint predicted during the debate over the 1996 Act that they would be serving huge chunks of the local market by now, yet they have moved surprisingly slowly.¹²

AT&T made its big splash in January 28, 1997, when it announced that it would begin offering local phone service on most outbound calls for any business dialing up bills of \$2,500 a month or more in 35 states.¹³ Many analysts found that offer disappointing, expecting perhaps a partnership announcement with GTE. Later it appeared that AT&T's strategy for entry into the local market involved a merger with SBC Communications.¹⁴ That idea was quickly quashed by Federal Communications Commission Chairman Hundt, and ever since AT&T's approach to entering the market has seemed murky. Currently, AT&T provides local residential service only in Sacramento, California, Libertyville and Waukegan, Illinois and Grand Rapids and Kent County, Michigan. It provides both business and residential service in Connecticut and Georgia.

Of the interexchange carriers (IXCs), MCI has been the most unapologetic in its strategy of going after business customers first. MCI has stated that its "long-term plans don't include penetrating below the top 30% of residential customers."¹⁵ MCI intends to build some of its own facilities, but does not plan to build local networks nationwide. Instead, MCI will pursue business customers through a combination of strategies -- resale, facilities and unbundled networks.¹⁶ The company has launched local service for mid-sized to large businesses in 25 markets (21 over its own networks) so far including Atlanta, Chicago, Los Angeles, New York, and Seattle -- and has announced plans to be in 31 to 60 markets by year end, depending on what newspaper you read. It only offers limited residential service in California, Illinois, and New York.

¹⁵ *Washington Post*, November 10, 1996.

¹⁶ Carolyn Hirschman, "The Big Three," *Telephony*, June 2, 1997.

Sprint has filed for regulatory approval to provide local service in 47 states and the District of Columbia. It has begun to serve large business customers in Orlando, Florida. Sprint has said that it intends to size up local markets carefully. "We're not going to throw dollars at what might be. When we go into a city we'll know which customers we're going after, and that will determine where we build or lease facilities," said Sprint President D. Wayne Peterson.¹⁷

The CLECs: The Feisty Pups

In addition to the long distance carriers, dozens of other companies are entering the local business service market. The CLECs seem to agree on a basic strategy for entering the long distance market -- building their own network infrastructures. In terms of marketing strategies, most of the CLECs say they plan to target small to medium-sized businesses. Although focused on the business market, many CLECs may pick up some residential business indirectly through IXC partnerships. AT&T just announced a new competition strategy involving the franchising of the AT&T brand name and marketing rights to affiliated carriers in wireless and local-phone services. The company has been talking with numerous alternative local exchange carriers to carry AT&T's traffic under the AT&T brand in competition with the local Bell companies and GTE. Potential partners for this first-time franchising of the AT&T brand name include small, independent phone companies, electric utilities and even cable television companies.¹⁸

Conclusion: Who Wins? Who Loses?

This preliminary report on the state of local competition revealed disturbing trends that prompt the need for further examination on a national scale. If the trends found in these three cities continue, there will be definite winners and losers in the competition game. The interests that stand to win include the business consumers, the long distance companies and the competitive access providers. The losers are residential consumers.

There is no doubt that competition has come to the business market. In urban business districts, the large long distance companies are working to capture customers by combining their local and long distance bills and bundling other services. In the cities surveyed in this report, it is the business customers that are the primary, if not exclusive, focus of both the large long distance companies and the smaller CLECs.

By delaying their entry into local service, the IXCs have kept their market, long distance, closed to the regional Bell companies. The Bell companies would bring a level of competition to the long distance market greater than that of smaller companies and resellers, which could force prices down. Unlike the IXCs, competitive access providers (CAPs) have nothing to gain by delaying their entry into the local service market.

¹⁷ Andrew Kupfer, "The Telecom Wars," *Fortune*, March 3, 1997, p. 136.

¹⁸ John Keller, "AT&T Sets Bold New Business Strategy," *The Wall Street Journal*, September 18, 1997, p. A1.

Therefore, these companies have moved the most aggressively -- swiftly negotiating interconnection agreements and signing up business customers.

As evidenced in this report, consumers are the losers in this stalemate. Bob Jenks, Executive Director of the Oregon Citizens Utility Board, says, "Companies promoted certain things they were going to do as a way to develop political momentum to get the act passed. Then they backed off."¹⁹

Consumers in high cost rural and inner city urban areas, stand to lose because with no incentives or mandates to provide residential service, the long distance companies will continue marketing primarily to business and some high-end residential users. Rural areas are expensive to serve because of the distances the lines must cover and the cost of the network is spread over such a small number of customers. Inner city urban areas are often costly and difficult to serve because of the high concentration of low income consumers, in old buildings, with old technology and very little business or upper income consumers to help share the cost of the network. These rural and inner city consumers are likely to see few, if any, choice of providers, resulting in less-competitive pricing and fewer incentives for companies to provide them with new services and technology.

Consumers also pay higher long distance rates than necessary because of a lack of competition in the long distance industry. Currently, the big three long distance companies continue to change their prices in lock-step fashion because there is no real competition in long distance. By taking their time in entering local competition, the long distance companies are gradually gaining market share in local service while keeping the local phone companies out of their core business.

Because of the lack of long distance competition, these companies are also cashing in on FCC changes designed to spur competition. Keep America Connected recently produced a report which sought to determine whether residential consumers would save money as a result of the FCC decision to lower access charges, the fees that long distance companies pay to the local phone company to start and complete a call. "In Search of Savings," found that few companies were passing these savings along to consumers. The report concluded that "only increased competition will push the [long distance companies] to pass along these savings."²⁰

Competition in all aspects of the telecommunications market is the key to bringing real savings, choices and new products to all consumers. The stalemate in the development of local service competition in the residential market is blocking all the major benefits of the landmark 1996 Telecommunications Act. Policy makers and consumers must demand an end to this standoff.

Executive Summary

Keep America Connected evaluated the state of competition in local telephone service in thirteen states including Arizona, California, Florida, Georgia, Louisiana, Massachusetts, Michigan, Mississippi, Montana, New York, Oklahoma, South Carolina, and Texas. We surveyed service providers, interviewed regulators, and reviewed press reports. We learned that:

- Companies offering local service are clearly cherry picking the most lucrative customers -- big businesses.
- Brisk competition exists for business customers. In the cities we surveyed, fifty companies provided local service to business customers. Businesses in all but five cities surveyed had four or more choices for local service.
- Only consumers in New York and Los Angeles had any significant choice in local service -- residential consumers can choose between four alternative local providers in LA and three in New York. In the cities surveyed, we found fifteen companies providing local service to residential consumers.
- Rural areas have the least number of potential competitors and few currently have choices. Arizona, Mississippi, and South Carolina had the fewest certified providers.
- Only three of the companies providing local residential service are actively advertising that service to all consumers.
- Small companies admit profitability is the reason for cherry picking the business consumers.
- Essential legal and regulatory hurdles, including certification and interconnection agreements, have been cleared in all thirteen states surveyed, making it possible for competitors to offer service to business and residential consumers.
- State regulators see clear differences between stated intentions of new entrants and actual services being offered.
- Company sales representatives are scripted to advance corporate, regulatory and policy goals -- sometimes at the expense of the truth.
- Companies who "plan to serve" the residential market estimated they would begin offering service in as little as one year or as many as six years from now.

Summary of Results

Conclusions

Interviews with providers, regulators and our review of press reports indicate that the regulatory environment and the market incentives conspire against the development of competition in the residential local service market. Robust, nationwide competition in the residential market is more likely when the long distance companies begin to enter the market seriously. Until then, regional

¹ State commissions provided this information. Sometimes commission staff were only able to provide estimates due to the fact that the number of certified providers changes daily.

² The Montana PSC does not have a formal certification process, it only requires companies to register with the commission. This number came from the Commission's list of registered providers which includes all telecommunications competitors not just those providing local service.

niche players may make inroads, but we will not see full scale competition. The long distance companies have no incentive to market local service as long as staying out of residential service protects their core business. The FCC and Justice Department rulings that keep the local phone companies out of the long distance market help the IXC's protect their profits while they cherry pick the lucrative business customers in the local service market.

Cherry picking, as a way to build infrastructure and raise capital, may be a rational business plan, but it can lead to detrimental outcomes for consumers.

First, it puts upward pressure on local rates. When the business customers leave the network, the residential customers all must share a greater portion of the costs.

Second, it undermines the incentives to invest in network infrastructure that can bring modern telecommunications services to consumers. Competition will drive the investment of all providers. If competition is only in the business market, innovation and improvement will go there first.

Third, it limits competition in the long distance market that the local phone companies could provide and it prevents consumers from buying all their telecommunications services from one supplier. Consumers would like to see long distance rates fall. More importantly, consumers would like to save money on their total communications bill. If consumers can combine their demand for services and purchase them from one company, they get convenience and are more likely to see savings.

As long as the FCC blocks Bell entry into long distance, there is no market incentive for long distance companies and other alternative local service providers to serve the residential market. Since it is unlikely that Congress or the states will mandate that all providers of local service to business customers also serve residential, market incentives must be created to bring competition to consumers.

Once local phone companies are allowed into the long distance market, all competitors will have an incentive to provide full service packages to consumers. Companies that can't provide consumers local and long distance service will be at a competitive disadvantage. The long distance companies will then have a tremendous economic incentive to provide local residential service as a way of keeping their long distance customers. Then, and only then, will it make economic sense for them to actively seek local residential customers.

The FCC should move to create these market incentives as quickly as possible. The state regulators and the FCC are charged with ensuring that local phone companies have opened their market to competition before they grant them the authority to provide long distance service. If a state has made the determination that the Bell company in their state has met the fourteen point checklist criteria, the FCC should not stand in the way. Consumers have been on hold long enough.

Introduction

Consumers are still waiting to see the benefits of the 1996 Telecommunications Act. The big three -- AT&T, MCI and Sprint -- continue to dominate the long distance market and residential consumers have no options for an alternative local provider. Policy makers are asking "why?" The Act brought with it the promise of a new era of competition in telecommunications. The pro-competitive environment was supposed to bring more consumer choices, lower rates, better service and economic growth. However, the anticipated competition and the resulting benefits for consumers are far from reality.

There has been a great deal of speculation about why competition does not seem to be developing as predicted. Despite the accusations of the IXCs that the local phone companies are blocking the development of competition, press reports reflect explanations ranging from unrealistic expectations on the part of the politicians and the public, poorly developed or non-existent business plans of the new entrants, and deliberate business plans that were based on cherry picking the most lucrative customers from the market.

Two other reports have been released recently that offer views on the state of competition. Peter Huber, one of the nation's leading industry consultants, produced a report that concluded that there is enormous competition in the local service market, but that it is all concentrated in 30% of the market -- high-end business customers.³

In San Diego, where there has been local service competition, a consumer group reported on how it is working. The Utility Consumers' Action Network (UCAN), a San Diego-based utility watchdog organization, described the local service market in San Diego as "a disaster area." UCAN found that currently a competitive local service market in San Diego and across California has not materialized for small customers. The few customers that are aware of competitive alternatives have experienced a wide range of service quality abuses including substandard customer service and incompetent service representatives. These problems combined with the tepid marketing effort by new competitors discourage consumers from switching local carriers.⁴

Keep America Connected⁵ sought to find out the state of local service through the eyes and ears of consumers. We wanted to find out whether companies were offering local service to residential customers -- and if they weren't, why not? We set out to answer these questions the easy way. We asked them.

³ Peter Huber, "Local Exchange Competition Under the 1996 Telecom Act: Red-lining the Residential Customer," November 4, 1997.

⁴ Bradley Fikes, "San Diego Area Local Telephone Competition A Mess, Watchdog Groups Says," *North County Times*, Escondido, CA, October 15, 1997.

⁵ Keep America Connected is a coalition of organizations representing older Americans, people with disabilities, rural and inner city residents, people of color, lower income citizens, labor and local phone companies who work together to ensure affordable access to modern telecommunications for all Americans.

Consumer Survey of Competitive Local Service Providers

Consumer surveyors encountered a variety of problems in requesting service from alternative local service providers. Identifying the potential providers was the first difficulty. Since few of the providers are advertising, consumers were unaware of the local service options in their area. Second, getting connected to a sales representative that could answer their questions often took several calls and a long wait on the phone. When our surveyors finally reached a customer representative, they often received vague or conflicting answers to their questions.

The consumers wanted to know four things:

- do you offer local service to residential customers?
- do you offer local service to businesses?
- why don't you offer local residential service?
- do you plan to offer local service to residential customers?

While it is reasonable to expect varying levels of knowledge among the different service representatives, particularly about the companies future business plans, it is also reasonable to expect that someone charged with selling a service would know what services are available. The frequency with which our surveyors were told, "I'm not sure" or "Maybe" was quite surprising.

Overall, our consumer surveyors found that even where local service was technically available, most companies were not actively signing up residential customers. With the exception of Los Angeles, few are really seeking out customers. AT&T is offering local residential service in four of the cities we surveyed and MCI in three of the cities, but rarely are they advertising the service, beyond some limited marketing to their long distance customers, and often they aren't even doing that.

We did find several smaller companies (competitive local exchange carriers) that are actively recruiting residential local service customers. RCN in Boston is one example of this kind of "niche" marketing that seems to be happening in the residential local service market.

Our surveyors found that most of the companies did offer local service to business customers. They were often told that the company had chosen that market over residential because it is more profitable. Some companies claimed to be serving business customers first to finance their building of a network that would ultimately serve both business and residential consumers. Others had no plans to enter the residential market.

Phoenix, Arizona

Consumers making inquiries into the availability of residential service in Phoenix had difficulty reaching company sales representatives and getting a clear picture of what their service options are. It turns out there are no alternatives to local service for residential consumers:

- **AT&T:** After being put on hold for seven minutes by AT&T, a consumer was disconnected. In her second call she was told that no local services were being offered, but the representative could not explain why or whether business customers could sign up for local service.
- **MCI:** Consumers were told that no local residential service is being provided. When asked whether MCI was offering local service to business customers the representative replied, "Well, since there isn't service offered to local residential customers I don't think we are offering service to business customers; we wouldn't do that." However, this statement contradicts the information provided on MCI's own webpage which indicates that local business service is indeed available in Phoenix.
- **Sprint:** A consumer was told that Sprint was not offering local service to either business or residential customers. When asked if they planned to provide service, the representative responded, "I don't think we are ready yet; but in the future, I am sure we will be providing service."
- **MFS:** A consumer calling MFS was switched to WorldCom and had trouble getting through. When she finally reached a sales representative she was told, "We are not serving residential customers for local service." When the consumer asked why, she was told, "I'm not sure and can't say why, but it's not being offered." The consumer asked if they were serving businesses and was told, "Yes."
- **TCG:** Consumers were told, "No, we are not serving residential local customers." Why? "Not sure but we will in the future, not sure when though." What about businesses? "Well, if it's a small business we require three lines for service."

Phoenix Consumer Survey Results

Sprint	No	No
TCG	Yes	No
MFS	No	No

Los Angeles, California

California has been considered a laboratory for local competition. When consumers called to inquire about local service in Los Angeles, they found that there are local service alternatives but they are hard to find.

- **AT&T:** It took two calls to get through to AT&T to find that it is currently reselling local residential service from Pacific Bell and plans "to move onto GTE next month."
- **MCI:** After three phone calls and a nine minute wait, we found that MCI is reselling both GTE and Pacific Bell services to local business and residential consumers. MCI local service rates are higher in GTE territory than in Pacific Bell-served regions.
- **Sprint:** After two calls, a Sprint representative said that they are reselling both Pacific Bell and GTE lines to offer residential and business local service. However, "it will take four weeks to get service."
- **Brooks Fiber:** Brooks Fiber "offer[s] simple business services but [has not] gotten into residential yet." The representative was uncertain whether new owner, WorldCom, would be interested in the residential market.
- **TCG:** After two calls, we were told that TCG is focusing on big businesses -- "that is ten lines or more and apartment buildings." They are not serving residential customers and "probably [won't] for a long time," according to a TCG customer representative.
- **MFS:** MFS is only providing local service to "major corporations." They "have no idea" when they will begin offering other services.
- **Winstar:** Winstar is only serving small to medium businesses. When asked why it was not serving residential customers, the representative responded, "It us not our market currently, but it may be in the future." Why? "I can't really say, I'm not sure."

Los Angeles Consumer Survey Results

Orlando, Florida

Consumers who called companies to inquire about local residential service found that no companies were currently offering that service. When consumers asked the companies if and when they would be serving residential consumers, they received a variety of responses.

- AT&T: AT&T diplomatically said that they plan to provide local service when they can offer the value and service desired.
- MCI: MCI representative said he knew of “no plans” to provide residential service.
- Sprint: Sprint representatives skirted around the issue of why they provide business but not residential service until he/she finally said that they will have residential service “soon.”
- Time Warner: Despite stated intentions to enter the residential market last year, Time Warner representatives had no knowledge of any plans to move into the telephone business.
- Intermedia: Intermedia provides local service to businesses, but not residential.

Orlando Consumer Survey Results

Time Warner	No	No
Intermedia	Yes	No

Atlanta, Georgia

Atlanta consumers who called to inquire about the availability of residential service were told by most companies that no residential service was being provided. In one case, where a company was offering local residential service, the consumer was actually discouraged from switching local carriers.

- **AT&T:** Consumers found it difficult to contact AT&T, but ultimately learned that it was providing residential local service. However, sales representatives discouraged our consumer from signing up, saying that the rates weren't significantly different from BellSouth's. The representative did suggest, however, that if the consumer was an AT&T long distance customer, it might then be to his advantage to use AT&T for local service.
- **MCI:** In spring of 1997, consumers were told that "MCI fiber optic line in Atlanta only provides service to corporate businesses with 20 or more lines. Residential service may be provided in the future through resale of Bell lines." Consumers this fall were told that there were no plans to move into residential.
- **Sprint:** Sprint representatives said they had no plans for providing any type of local service.
- **MFS:** In Spring of 1997, consumers were told, "MFS is strictly commercial. MCI and AT&T are looking to resell local regional Bell service. We do not want the residential business. That is not our market. The residential apartment business is too high debt, people move in and out, advertising costs are too high. We have always supported the major business districts. That is where the money makers are." However, this fall they heard residential service was "always a possibility."
- **Winstar:** Winstar representatives said the company would not be moving into local residential service "because we are still young."
- **MediaOne:** MediaOne appeared to be the only provider with serious plans for providing residential service, but even it is rolling its service out to high-end consumers first.

New Orleans, Louisiana

Consumers called customer representatives from various companies to ask about local service. Some representatives were very direct about their company's plans not to provide local residential service, others offered vague responses to consumer questions about local service.

- AT&T: Callers to AT&T were told that local service was coming to New Orleans "soon."
- MCI: MCI told callers that it would begin offering residential service after January 1998.
- Sprint: Sprint told consumers that it offered only business service in New Orleans and had no plans to provide residential local service.
- ACSI: ACSI offers local business service and does not plan to offer residential service.
- Cox Fibernet: One representative of Cox claimed that residential service would be offered after January 1, 1998; another said that residential service "was possible."

Boston, Massachusetts

Consumers had difficulty reaching companies to inquire about their local service options in Boston. Once they did, they found that the companies providing local service are mainly serving business customers.

- **AT&T:** After two phone calls and a six minute wait on hold, an AT&T representative stated that he “had no idea when service will be offered,” but that “if they did offer local service, they would offer both residential and business.”
- **MCI:** Contacting MCI took two phone calls, two transfers and a voice mailbox. Ultimately calls were returned to the consumer and we learned that MCI is providing local service in Boston.
- **Sprint:** Consumers calling Sprint were told, “No, we don’t offer local service in this city. We are only in California. Maybe we’ll expand. I really don’t know.”
- **MFS:** After getting through to MFS, a consumer was told that although they do not offer local residential service, MFS does provide service to businesses. When asked why, the representative said that they plan to provide local residential service in the future but right now they are only offering it to businesses because “you have to start at where you make the most revenue so that you can generate a good infrastructure. Usage levels are dictating where we are going.”
- **TCG:** A TCG representative stated, “We are not offering residential service. However, we are working with businesses in providing them service.” When asked why they were not serving residential consumers, the representative said he was “not totally sure, maybe in the future. We “primarily service businesses that need a T-1 level network.”
- **RCN:** RCN is providing local service to “everyone in the area code” and selling the service at a 5% discount from NYNEX (Bell Atlantic). It is in the process of installing its own switches and facilities everywhere they offer service. In the meantime they are “reselling the NYNEX lines.” Representatives offered specific information about rates and services.
- **Winstar:** Calling Winstar resulted in a rapid busy signal on two attempts. On the third attempt, our surveyor spoke with a representative that stated, “Local service is only being offered to small and medium size businesses.” The representative defined a small business as having “8 lines.” When asked why they were not providing residential service the representative said, “Because the cost to set-up local residences is too high. Maybe [we’ll offer residential service] down the road or so but it won’t be up for quite awhile.” The customer asked if it was the cost keeping them from serving the residential consumers. “Yeah,” said the representative, “and the technical challenges of wiring networks for service. Right now we are targeting business buildings, they are our primary target because once a building is wired it’s easier to provide phone lines to business customers in that building.”

Detroit, Michigan

Consumers had difficulty reaching many of the companies to inquire about local service in Detroit. When companies were finally contacted, consumers found that alternative providers for residential service were virtually non-existent.

- AT&T: Consumers calling AT&T learned that it is offering local service if you are currently served by Ameritech. A representative told our consumer about the three packages for local service.
- MCI: According to one MCI customer representative, MCI is offering both residential and business local service. However, a representative of MCI Local said it is only serving business customers.
- Sprint: A Sprint representative told our consumer that it is not offering services in this area, and currently is only offering local service to California residents on a trial basis. When asked if they planned to provide service, the representative said, "I have no idea about plans. I suggest you call back to check."
- Brooks Fiber: Brooks Fiber is not offering any service in the Detroit area and currently, has no plans to do so. The company, however, does serve residential customers in Grand Rapids and parts of Lansing.
- MFS: An MFS representative said, "No, we are not currently offering service to local residential customers" but, "yes, we do serve business customers." Why only business? "Not sure, you will have speak with our corporate offices to get more details."
- TCG: TCG only provides local service to businesses; it does not serve residential consumers.
- Winstar: Winstar is "focusing on business first" but in order to receive local business service the customer must meet a certain number of qualifications.

Jackson, Mississippi

Consumers calling companies to find out about the availability of local service found that few companies were providing any type of local service. For those offering local business service, residential service was a “way off in the future” consideration.

- **AT&T:** AT&T’s residential consumer line representatives indicated that no local service was being provided to residential customers at this time in Mississippi, but wasn’t sure about service for businesses.
- **MCI:** MCI has not yet applied for authority to provide service. When trying to call MCI to inquire, a consumer was disconnected once and then told that the MCI only provides residential service in California and New York. The consumer then asked about local business service and was transferred to the business department who could not answer questions about local service.
- **Sprint:** Sprint is certified to provide local service but is not offering local service to either local business or residential consumers.
- **Brooks Fiber:** Brooks Fiber currently offers local service primarily to downtown businesses. When asked if service would be provided to residential consumers, a Brooks Fiber representative stated that, “If we do it will be way off [in the future] because our primary focus is the business sector, we’re running our fiber there. [Moreover, residential service] is very expensive.”
- **ACSI:** ACSI provides local service to business customers only and estimates that any potential entry into local residential service was 3-6 years away.

Billings, Montana

Consumers who called companies about local service in Billings, received different responses from different sales representatives of the same companies. In addition to receiving conflicting responses, consumers found virtually no local service options in Billings.

- **AT&T:** A consumer who called AT&T to request local residential service in Montana, was first told by one salesperson that they do offer some packages and then told by another that they do not but that they are planning to in "a year . . . six months, they don't tell us that." When asked if AT&T offers local service to businesses, the representative replied that they do not, because if they did they "would automatically offer it to residential customers."
- **MCI:** An MCI representative told the caller that it does not offer local service because "the local companies are fighting tooth and nail to keep the long distance companies out." When asked about local business service the same representative replied that "when [MCI does] go in an area they'll go with everything, they don't go with just residential or business services."
- **Sprint:** Sprint told the consumer that the only state in which it offers local service is California and it is like a "test market to see how it goes." When asked about future plans for local service, the representative replied, "I don't know about any plans to move beyond California."
- **Citizens Telecom:** One representative told a consumer that, "Yes, we offer both local service to residential and business customers in Billings, Montana." However, a different representative said that "we only offer local service in Eureka, Libbie and Troy, not Billings." When asked about future plans, the second representative said that he was not aware of any.

New York, New York

New York was one of the few cities where consumers had a choice in local carriers. However, to date competition in New York has been focused mainly on medium to large businesses and high-end residential consumers. Consumer callers inquiring about local service in New York City found that this was true of most companies they called.

- **AT&T:** AT&T is only serving the Rochester County region in New York.
- **MCI:** MCI representatives told our consumer, "Yes, we are serving the New York City area including the five boroughs." When asked about business service he replied that "we are serving businesses in the same area, if we can serve residences we'll serve the businesses in that area."
- **Sprint:** Sprint is not offering local service to businesses or residential customers.
- **Winstar:** A Winstar representative was very candid in his response to why the company serves local business but not residential customers. He stated that it's "currently not in the company's interest because it's more expensive to serve residential customers."
- **Citizens Telecom:** Citizens Telecom offers facilities-based residential and business local service mainly in central and upstate New York. They do not provide local service in New York City. However, while business service is widely offered, residential service is only provided in a limited area because, according to a customer representative, "it's not practical to get any more residential, the company is basically just trying to get business." When asked if that is because business service is more profitable, the representative replied, "Definitely."
- **MFS:** A customer representative said that they do not offer local residential service but they plan to look into providing it. Currently they do not even provide service for small businesses, only major businesses and corporations.
- **TCG:** TCG offers residential local service but only in a limited area. According to the customer representative, "I can't tell you if we can serve you without the prefix of your number or the prefix of your neighbor's number." When asked why the service varies, the representative said he was "not sure but it does and I can't confirm service until I have a number."
- **RCN:** RCN is reselling lines in the 212, 718, 516, and 914 area codes and is planning to build facilities. When asked if they were offering service to businesses as well, a representative said they were but "I don't know the details. I would have to transfer you to another department."
